

BASEL MOSTAFA IBRAHIM

SOC Analyst Candidate | Cybersecurity Student | Arabic (Native) · English (B2)

Cairo, Egypt • +20 100 947 4449 • baselmostafa16@gmail.com • [linkedin.com/in/baselmostafa](https://www.linkedin.com/in/baselmostafa) • github.com/basellmostaffa

SUMMARY

Cybersecurity undergraduate (2027) with a full CCNA foundation, currently in SOC/Incident Response training. Built and operate a multi-VM home SOC — Wazuh and Elastic SIEM with custom detection rules, a FortiGate perimeter, and a malware analysis VM producing documented dynamic analyses of live ransomware and RAT samples. Supports 600+ users in a live IT environment. Seeking a SOC Level 1 Analyst role.

TECHNICAL SKILLS

SIEM & Detection: Wazuh (manager + agent deployment), Elastic Stack — Elasticsearch, Kibana, Elastic Agent, Fleet; custom detection rules (Windows Event IDs 4624/4625), dashboards, log correlation; Splunk (fundamentals)

Threat Analysis: Dynamic malware analysis — Process Monitor, System Informer, Autoruns, Wireshark; IoC extraction, MITRE ATT&CK mapping, VirusTotal OSINT enrichment; alert triage & incident reporting

Networking & Security: CCNA — ITN, SRWE, ENSA; VLANs, Inter-VLAN Routing, OSPF, static routing, ACLs, DHCP, Port Security, STP; FortiGate firewall (DHCP, routing, policies)

Systems & Infrastructure: Windows Server 2022 — Active Directory (Users, OUs), Group Policy; Linux (Ubuntu); VMware Workstation — isolated multi-VM lab design; Macrium Reflect imaging

Scripting & Tools: Python (control flow, OOP), PowerShell & CMD basics, Git/GitHub, HTML/CSS/JavaScript

EXPERIENCE

Cyber Security Incident Response Analyst Trainee — DEPI (Digital Egypt Pioneers Initiative)

Jul 2026 – Present

- Blue Team program covering Network & OS Fundamentals, Security & Attack Techniques, Incident Response & Digital Forensics, and SIEM/SOC Operations & Automation.
- Selected as group leader for a 5-member capstone project team, coordinating scope and task distribution.

IT Support & System Administration Intern — Pinnacle Misr

Jul 2026 – Present

- Support 600+ users across architecture, landscape, structural, HR and design departments spanning two Cairo offices and a Saudi branch, via the in-house ERP service desk.
- Imaged and deployed 20+ workstations with Macrium Reflect, provisioning full engineering software stacks (Autodesk AutoCAD, SketchUp) for new users.
- Deploy and troubleshoot IP phones end-to-end: trace cabling from wall port to patch panel with a toner probe and tester, then terminate onto PoE switch ports.
- Assist with Active Directory administration (user and OU management) alongside the senior sysadmin; enroll staff biometrics on the Hikvision access control system.
- Handle endpoint troubleshooting, printer support and hardware maintenance; work directly in the server room with switches, routers and the perimeter firewall.

PROJECTS

Enterprise SOC Home Lab

Wazuh • Elastic Stack • FortiGate • Windows Server 2022 • VMware Workstation

- Deployed a Wazuh manager on Ubuntu Server with agents across two domain controllers and three Windows clients for centralized log collection and threat monitoring.
- Deployed a parallel Elasticsearch/Kibana stack with Elastic Agent and Fleet on all endpoints; authored a threshold-based brute-force detection rule (Event ID 4625) and a Kibana dashboard for top targeted users, failed-logon timeline and logon source/type.
- Deployed FortiGate as the lab gateway — DHCP for clients, static addressing for servers, and policy-controlled internet access replacing the default hypervisor NAT.

Dynamic Malware Analysis — 4 Documented Reports

Process Monitor • System Informer • Wireshark • Autoruns • VirusTotal • MITRE ATT&CK

- Detonated live samples (Malware Bazaar, EC-Council) in an isolated host-only Windows 11 VM; each report maps findings to MITRE ATT&CK, rates IoCs by Pyramid of Pain confidence, and states analysis limitations explicitly.
- XWorm/AsyncRAT: correlated a 47/64 VirusTotal detection with registry Run-key persistence into %APPDATA% (T1547.001), spoofed publisher metadata masquerading as CCleaner (T1036.005), and PowerShell living-off-the-land execution (T1059.001).
- Chaos Ransomware: documented in-place mass encryption and svchost.exe running under an interactive user account; analysed a bundled defence-evasion script that attempted to disable Defender services via registry and was blocked by host controls (T1562.001).

Multi-Branch Enterprise Network

Cisco Packet Tracer • VLANs • OSPF • ACLs • Port Security

- Designed a two-router, multi-switch branch topology with departmental VLAN segmentation, Inter-VLAN routing, DHCP and OSPF; hardened the access layer with Port Security and ACL filtering.

EDUCATION & CERTIFICATIONS

B.Sc. Computer Science — Cybersecurity Specialization, Arab Open University, Cairo

Expected 2027

Certifications: Cisco CCNA — ITN, SRWE, ENSA (Completed, 2026) | Certified Ethical Hacker (CEH) — university coursework | MCSA — Windows Server coursework (self-study)

TryHackMe: 35+ rooms completed; SOC Level 1 path in progress — Intro to SIEM, Elastic Stack, Splunk, Alert Triage & Reporting, Pyramid of Pain, SOAR, EDR
